

EDF Energy NA and Lake County Press enter Renewable Supply Agreement for Illinois Facilities

HOUSTON, TX, November 1, 2021 EDF Energy North America (EDF Energy NA) is proud to announce its electricity supply deal with Lake County Press to their Illinois facilities, including Green-E® certified Renewable Energy Credits (RECs) equal to 100% of Lake County Press' consumption through 2025.

Headquartered in Houston, EDF Energy NA is an industry leading provider of renewable energy solutions to North American commercial & industrial consumers. EDF is committed to offering a full suite of sustainability options to our customers, no matter where they are on their sustainability journey. "By working together with Lake County Press and Ideal Energy to identify a suitable renewable solution, EDF Energy North America is proud to have helped Lake County Press on their first step in advancing their sustainability goals," said Deb Merrill, President of Retail at EDF Energy NA.

About EDF Energy North America

EDF Energy North America (EDF Energy NA) offers a full range of structured solutions — energy supply, transportation, risk management products and technology — to help customers optimize their energy assets and successfully compete in the marketplace.

As one of the top providers of generation services to third-party power stations in North America we provide energy management solutions, natural gas supply and real-time desk services to power generators across the United States. Retail energy aggregators, with footprints across the deregulated markets, trust us to provide wholesale market supply and ISO interface services. Our Retail Supply and Services arm offers a complete suite of services to commercial and industrial customers including power and natural gas supply, renewable products and energy portfolio optimization structures in deregulated markets across North America. Our marketing and trading platform provides comprehensive coverage of financial and physical products in power, natural gas, environmental products, NGLs, congestion management, derivatives, and financial crude oil products.

We are part of the EDF Group, a global leader in low-carbon energies, with a diversified generation mix based on nuclear power, hydropower, new renewable energies and thermal energy. The EDF Group is involved in supplying energy and services to approximately 39 million customers in France and across the world. For more information, visit www.edfenergyna.com.
